DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

The present invention includes a semiconductor device test apparatus comprising a test processor which applies a test signal to a semiconductor memory device under test and a repair analysis computing unit which performs repair analysis.

The claimed invention recites features such as: "a repair analysis computing unit which performs repair analysis of the defective memory cell information to determine repair whether the defective memory cells are repairable; a general-purpose repair analysis part comprising: a memory repair analysis program; a user analysis program storage storing a user analysis program which is designated to perform, based on specific repair conditions, repair analysis of the defective memory cell information for a specific type memory device other than the regular type memory devices that has a specific redundancy structure and has the specific repair conditions; and an analysis control part with means for performing, when the specific type memory device is subjected to repair analysis, repair analysis for the specific type memory device in accordance with the user functions of the user analysis program which are inserted to the user function insertion points of the memory repair analysis program based on the specific repair conditions.

The prior arts of record (Oikawa et al. U.S. Patent 6,459,292 (herein Oikawa), in view of “GNU Emacs 19 Manual” by Richard M. Stallman (herein Stallman)) do not teach the same device.

Oikawa teaches: a semiconductor device test apparatus (abstract): a test processor which applies a test signal to a semiconductor device under test and obtains information about a defective memory cell from a response signal (figure 1, element 20); and a repair analysis computing unit which performs repair analysis of the defective memory cell information to determine a way to repair the defective memory cell (figure 1, element 50 – 5F).

Stallman teaches: a user function means for inserting user functions of a user-specified user analysis program to user function insertion points between operations of the memory repair analysis program to make a change to an analysis program (section 30.2.3 Hooks, paragraph 1 – 3).

However, the prior arts of record fail to disclose, teach, or suggest in combination: a user analysis program storage storing a user analysis program which is designated to perform, based on specific repair conditions, repair analysis of the defective memory cell information for a specific type memory device other than the regular type memory devices that has a specific redundancy structure and has the specific repair conditions; and an analysis control part with means for performing, when the specific type memory device is subjected to repair analysis, repair analysis for the specific type memory device in accordance with the user functions of the user analysis

program which are inserted to the user function insertion points of the memory repair analysis program based on the specific repair conditions.

Claims 1 – 3, and 5 – 14 are allowable over the prior arts of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
